

Gravity: Inverted Universal Globe Spin Theory – 10/28/2007

William D. Short, Balderston Drive, Exton PA, USA

Specific Topic: #44, original thought, The Tropopause System Applied in the Universe, a Center of Gravity is Created and Maintained

Exhibit: Section B - 31 - A

Date: 11/7/2007

This illustration simply takes what is already known as accepted in Science, the Tropopause System, (please see Exhibit A – 23 – C) and it applies the very same principle of science to the “Inverted Universal Globe Spin Theory” in order to understand how the “Inverted Universal Globe Spin Theory” physically works. This applied principle of science explains, clarifies, illustrates, and demonstrates how Gravity is both created and maintained.

An “Inward Directed Pulling Center of Gravity” towards the Center Core of a Planet is created by simply getting an object inside a larger finite global object to rotate in the opposite direction of the finite larger global object, thus the inversion. It is maintained then by simply continuing the rotation in the opposite direction, which in turn is maintaining the inversion.

By way of illustration we then take this accepted principle of science, the Tropopause System, (Rotating Inverted Systems that are Creating a Downward Pulling Force) and apply it to a smaller object that is now rotating inside a larger object whereby the larger object is rotating in the opposite direction, (the Inversion). We find that the inverse spin of the smaller object against the spin of the larger object creates a gravitational pull towards the core/center of the earth, an inward center of gravity.

Gravity: Inverted Universal Globe Spin Theory – 10/28/2007

William D. Short, Balderston Drive, Exton PA, USA

Specific Topic: #45 original thought, Gravity, Magnetic Fields, and Global Warming – All Connected

Exhibit: Section B - 31 - B

Date: 11/10/2007

This next illustration begins to connect the dots. Gravity at this point in this work is believed to create and maintain “Magnetic Fields, and “Global Warming”.

Under Gravity:

1. The “Coriolis Effect” is part of the evidence that supports the “Inverted Universal Global Spin Theory”.
2. “Vortex Formations” are part of the evidence that supports the “Inverted Universal Globe Spin Theory”.
3. Understanding how Gravity actually does works will also lead to the logical conclusion that our Universe is Finite, and it is not endless.
4. Gravity is in active motion and it is created and maintained through an inverted rotation system.
5. The new formula for Gravity = Mass x Velocity, or Surface Space x Weight x Speed.
6. Momentum also = Mass x Velocity.
7. The “Global Spin Model” is a good way to explain the how Gravity Works.
8. The Direction Water takes as it Rotation in Drains eliminates the “Wind” as a cause for the “Coriolis Effect”.

Under Magnetic Fields:

1. Provides the Earth a truth North.
2. Keeps the Earth from being drawn into the Sun and hitting other planets, or they hitting the Planet Earth.

Global Warming:

1. Our Earth’s Core is coming under ever increasing pressure as we continue to rotate, with no relief valve, and no way to reverse the aging process.
2. Gravity is aging.
3. Our Planet is getting hotter at its Core. Pressure is increasing and this is causing the boiling level to rise.
4. Our Sun is getting hotter too. Pressure is increasing and this is causing the boiling level to rise. The sun experiences “direct gravity” and it is also at the very center of the “in-direct gravity” that is taking place in our Solar System.
5. The primary cause of our Earths Global Warming is that our Earth’s Center Core is getting warmer. The secondary cause would be that the Sun is also warming up at the same time, and then the final cause would be the abuse of our own environment. We are not helping things by polluting our Earth, so we still need to do what we can but we can not stop the “Inverted Spin” that is taking place, which is a much bigger cause.

Specific Topic: #46 original thought, Gravity and Magnetic Fields

Exhibit: Section B - 32 - A

Date: 11/7/2007

This illustrates the magnetic fields that are around us, and points out that heat can de-magnetize a magnetic field.

To put in other words the core of the Earths is hot, and the “Globe Spin Model” demonstrates how magnetic field can be created and maintained at both polar areas, (North and the South Pole). The heat at the core of the Earth would de-magnetize the fields in the middle.

Permanent and temporary magnets

A permanent magnet retains its magnetism without an external magnetic field whereas a temporary magnet is only magnetic while within another magnetic field. Inducing magnetism in steel results in a permanent magnet but iron loses its magnetism when the inducing field is withdrawn. A temporary magnet such as iron is thus a good material for electromagnets. Magnets are made by stroking with another magnet, tapping while fixed in a magnetic field or placing inside a solenoid coil supplied with a direct current. A permanent magnet may be de-magnetised by subjecting it to heating or sharp blows or placing it inside a solenoid supplied with a reducing alternating current.

Gravity: Inverted Universal Globe Spin Theory – 10/28/2007

William D. Short, Balderston Drive, Exton PA, USA

Specific Topic: #47 original thought, Magnetic Fields, Heat and Our Core

Exhibit: Section B - 32 - B

Date: 11/7/2007

This illustration was put together to illustrate the magnetic fields that are in motion because of how Gravity is created and maintained.

The magnetic fields created and maintained through gravitational activity “Spiraling towards the Center the Earth’s Core” help keep the planets apart, “The Repelling Magnetic Affect”.
